

GLOBAL JOB MARKET & SALARY ANALYSIS

PRESENTED BY:

PRANAI TEJA SABBE - 69234883

PROJECT OBJECTIVE:

- ❑ Analyze global job market trends using real-world data.
- ❑ Understand salary variations across experience levels.
- ❑ Identify demand for roles across industries and locations.
- ❑ Present insights in a clear and structured manner.

DATASET DESCRIPTION:

- Two real-world job market datasets from Kaggle.
- Contains job titles, experience levels, skills, salaries, and locations.
- Salary information standardized in USD.
- Includes company size, industry, and employment type.

METHODOLOGY

- Loaded and combined two datasets into a single DataFrame
- Removed duplicate job postings
- Cleaned salary and experience level fields
- Prepared data for analysis and visualization
- Compared the Average Salary by Experience Level

TOOLS & TECHNOLOGIES USED:

- ✓ Python for data processing.
- ✓ Pandas for data cleaning and analysis.
- ✓ Matplotlib & Seaborn for visualization.
- ✓ Streamlit for interactive dashboard development.

seaborn

Matplotlib

VISUALIZATIONS:

➤ Some of the visualizations are shown below:

1. Top 10 In-Demand Skills
2. Salary Distribution
3. Average Salary by Country

4. Role-wise Salary

5. Job Distribution by Industry

6. Salary Distribution by Experience Level

STREAMLIT APP DASHBOARD

KEY INSIGHTS:

- ❑ Salary increases significantly with experience level.
- ❑ Senior and executive roles receive the highest compensation.
- ❑ Mid-level roles dominate the job market.
- ❑ AI job demand is spread across multiple industries.

CONCLUSION:

- The AI job market shows strong demand for experienced professionals
- Salary trends reflect skill level, experience, and responsibility
- Data visualization simplifies complex job market data
- The project demonstrates practical data analysis skills

THANK YOU
